

DIGITAL JERSEY

DAY 3 · WEDNESDAY

Build it

By tonight: a live, working slice a real prospect can click, book or pay on.

3

BUILD PATHS

09:00-17:15

TODAY'S HOURS

Digital Jersey Academy · Founder Bootcamp

03

Today, start to finish

09:00-09:10

Morning huddle

 TOGETHER

09:10-09:20

Set today's product context

 SOLO

09:20-09:45

Sort your requirements: Must, Should, Could, Won't

 SOLO

09:45-10:15

Why builds die from overscoping, then a live wall sort

 TOGETHER

10:15-10:30

Break

 BREAK

10:30-11:00

Map the story: sequence the build, define done

 SOLO

11:00-11:30

Build brief, blueprint, tech stack

 1:1

11:30-12:45

Domain, email and GitHub set up, build begins

 SOLO

12:45-13:30

Lunch, staggered, the build keeps going

 BREAK

13:30-16:15

 SOLO

Heads-down build

16:15-16:30

 BREAK

Break

16:30-17:00

 SOLO

Landing site goes live

17:00-17:15

 TOGETHER

Rank what's left, evening close

09:00-09:10

👥 TOGETHER

Morning huddle

Say today's number. Wednesday's is usually blunt: "a live URL by 5pm", or the specific thing a stranger will be able to click, book or pay on.

09:10-09:20

SOLO

Set today's product context

Lock in your path (software, hardware or services), write what “live and actionable” means for it, and pin your MVP to one sentence. Five minutes of clarity now stops you building the wrong thing all afternoon.

09:20-09:45

SOLO

Sort your requirements

Sort every requirement into Must, Should, Could and Won't. Cap Musts at seven, on paper, before you waste build time defending a feature you invented this morning.

09:45-10:15

👥 TOGETHER

Why builds die from overscoping

Every extra Must costs a Should. By tonight you need one thing that works end to end, not five things half-built. Overscoping is the single biggest reason a five-day build never ships.

THE MATHS

Do this instead

Cap Musts at seven. If you're sitting at ten, five of them are Shoulds wearing a disguise.

09:45-10:15

👥 TOGETHER

Is it really a Must?

CLICK A CARD TO RUN THE TEST

THE CLAIM

"A prospect literally cannot act without it"

TRY INSTEAD

That's a real Must. Keep it.

CLICK TO SEE THE FIX

"It would be nice, and users might expect it"

TRY INSTEAD

That's a Should. Cut it from today's build.

CLICK TO SEE THE FIX

"Two of us disagree whether it's essential"

TRY INSTEAD

If it's debatable, it's not a Must. Musts are obvious.

CLICK TO SEE THE FIX

"I already half-built it, feels wasteful to cut"

TRY INSTEAD

Sunk cost isn't a reason. Cut it anyway if it isn't load-bearing.

09:45-10:15

👥 TOGETHER

What a sorted board looks like

MUST

Founder can book a real call

Payment actually goes through

SHOULD

Email confirmation

A logo on the page

COULD

Dark mode

Saved preferences

WON'T (THIS WEEK)

Multi-language support

A mobile app

09:45-10:15

👥 TOGETHER

How to run the wall sort

Group Whole room, standing at the wall

Bring Sticky notes, a marker, wall or whiteboard space

Time ~15 minutes

0:00

Post every Must on the wall. One sticky note, one sentence, no jargon.

3:00

Each founder defends their Musts in turn: one sentence each, no more.

per turn

The room can challenge: "that sounds like a Should", and you answer, out loud, right there.

final

Anything you can't defend comes off the wall, into the Should column.

DEBRIEF

What's still on the wall that nobody could actually defend?

10:15-10:30

Break

Back at 10:30

10:30-11:00

SOLO

Map the story

A MoSCoW list says what to build, not the order or the finish line. The story map draws one line through it as the MVP slice, and writes a testable “done” for every Must.

11:00-11:30

∞ 1:1

Build brief, blueprint, tech stack

CLAUDE DRAFTS, YOU CORRECT

This moves fast because it's a draft-then-explain session: Claude drafts, then walks it through in plain English and asks you to poke holes with your own domain knowledge. Your corrections reshape the draft, live, with Seb in the room.

01

Build brief

A single brief Claude Code can build from without guessing.

02

Blueprint

Diagrams: what it stores, how it fits together, what it's made of.

03

Tech stack

One chosen stack, a monthly cost, the accounts to open.

Done when you could retell the document to a friend.

DRAFT, THEN EXPLAIN BACK

11:30-12:45

SOLO

Domain, email and GitHub set up, build begins

A trust officer or law-firm partner won't enquire through something.vercel.app from a personal Gmail. A real domain and a tracked repo are the cheapest credibility you'll buy this week.

- A domain you own, and business email on it
- A GitHub repo, with one issue per Must
- The build itself starts the moment setup is done

12:45-13:30

Lunch

Back at 13:30, the build keeps going

13:30-16:15

SOLO

Heads-down build

WHAT SHIPS, BY PATH

Software

A deployed working slice on a public URL.

Hardware

A demonstrable prototype, CAD render or physical mock, plus a pre-order or waitlist page taking real payment intent.

Services

A productised service package, one sample deliverable, plus a bookable intake page.

The shared spine

A live page a real prospect can act on. That's true whatever you're building. Facilitator circulates one to one, no group session this block.

16:15-16:30

Break

Back at 16:30

16:30-17:00

SOLO

Landing site goes live

This is the page every Thursday email, post and call points at. It has to look like you, capture leads where you can see them, and read cleanly on a phone.

Rank what's left, evening close

01

List every open item between you and a paying customer

02

Rank them, and name the top 3 blockers

03

Confirm the live URL, prototype or sample actually works end to end

Cut scope before you cut sleep.
